Bigdata Challenges

For all 3 projects of this course, we will stress the students who registered in the Honors Program with very large input datasets (e.g. more than 100M).

One student is only allowed to submit one code copy for both the "normal" project requirement and the bigdata challenge.

To receive the honor grade, a student should:

- For all projects: deliver correct submission.
- For all projects: the performance should be among top 10% of the whole class.
- End of semester: a short project report is required.

- No honor grade is granted to who is unable to finish all projects.
- No partial grade will be assigned.

The deadlines will be the same as the project deadlines for the rest of the class.
